C Programming Structure Examples. In this article, you'll find all the necessary examples and source code on structures in C. A structure is a collection of variables of different data types. To understand all examples in this page, you should have knowledge of following structure topics.

### **C Programming Structure (struct) Examples**

Structure is a group of variables of different data types represented by a single name. Lets take an example to understand the need of a structure in C programming. Lets say we need to store the data of students like student name, age, address, id etc.

### **Structure in C programming with examples - BeginnersBook**

A struct cannot inherit from any type, but can implement multiple interfaces. " Every interface member (method, property, indexer) must be implemented or inherited from a base class.
