Molecular Spectroscopy | Spectral Line | Electromagnetic

The origin of spectral lines in molecular spectroscopy is the absorption, emission, and scattering of a photon when the energy of a molecule changes. In atomic spectroscopy, all transitions reflect changes in the configuration of electrons. In molecules, in addition, there are energy states corresponding to nuclei vibrations and rotations.

Spectroscopy / s p Éˆ k Èˆ t r Éˆ s k É™ p i / is the study of the interaction between matter and electromagnetic radiation. Historically, spectroscopy originated through the study of visible light dispersed according to its wavelength, by a prism.Later the concept was expanded greatly to include any interaction with radiative energy as a function of its wavelength or frequency.
