Failure mode, effects and criticality analysis (FMECA) is an extension of failure mode and effects analysis (FMEA). FMEA is a bottom-up, inductive analytical method which may be performed at either the functional or piece-part level. FMECA extends FMEA by including a criticality analysis, which is used to chart the probability of failure modes against the severity of their consequences.

Solar cell efficiency refers to the portion of energy in the form of sunlight that can be converted via photovoltaics into electricity.. The efficiency of the solar cells used in a photovoltaic system, in combination with latitude and climate, determines the annual energy output of the system.For example, a solar panel with 20% efficiency and an area of 1 m 2 will produce 200 W at Standard ...
