### **Environmental occurrence and risks of perfluoroalkyl**

Perfluorinated Compounds (PFCs) or perfluoroalkyl substances (PFAS) are a family of hundreds of human-made chemicals as described above. The two best known groups of this family of chemicals are the perfluorocarboxylic acids (PFCAs), which include perfluorooctanoic acid (PFOA), and the perfluorosulfonates (PFSAs), which include perfluorooctane sulfonate (PFOS).

Polytetrafluoroethylene (PTFE) is a synthetic fluoropolymer of tetrafluoroethylene that has numerous applications. The best known brand name of PTFE-based formulas is Teflon by Chemours. Chemours is a 2015 spin-off of DuPont Co., which discovered the compound in 1938. PTFE is a fluorocarbon solid, as it is a high-molecular-weight compound consisting wholly of carbon and fluorine.

What are PFOA and PFOS? PFOA is a highly fluorinated compound with low surface tension, making it a perfect chemical to help make products non-stick, water resistant and stain resistant.

### **Perfluorooctanoic Acid (PFOA) & Other PFAS Chemicals**

Chemicals can be found in many of the products we use in our everyday lives. Some chemicals pose risks to humans and the environment. Under the Toxic Substances Control Act (TSCA) and the Pollution Prevention Act, EPA evaluates potential risks from new and existing chemicals and finds ways to prevent or reduce pollution before it gets into the environment.

### **Chemicals under the Toxic Substances Control Act (TSCA**

Perfluorooctanesulfonic acid (conjugate base perfluorooctanesulfonate) (PFOS) is an anthropogenic fluorosurfactant and global pollutant. PFOS was the key ingredient in Scotchgard, a fabric protector made by 3M, and numerous stain repellents. It was added to Annex B of the Stockholm Convention on Persistent Organic Pollutants in May 2009. PFOS can be synthesized in industrial production or result ...

### **Perfluorooctanesulfonic acid - Wikipedia**

The use of per- and polyfluoroalkyl substances (PFASs) as grease and stain repellents in consumer products started in the 1950s. Common properties of PFASs include thermal and chemical stability as well as high water and oil repellency. These characteristics make PFASs especially suitable for the use in a variety of food contact materials (FCMs).

### **Per- and polyfluoroalkyl substances (PFASs) | Food**

Several per- and polyfluoroalkyl substances (PFAS) have been measured in U.S. National Health and Nutrition Examination Survey (NHANES) participants 12 years of age and older since 1999–2000, but PFAS data using NHANES individual samples among children younger than 12 years do not exist.

The chemicals targeted by the Stockholm Convention are listed in the annexes of the convention text: Annex A (Elimination). Parties must take measures to eliminate the production and use of the chemicals listed under Annex A. Specific exemptions for use or production are listed in the Annex and apply only to Parties that register for them.

### **Listing of POPs in the Stockholm Convention**

Following the Environmental Protection Agency's (EPA) release of new drinking water health advisory standards for PFOS (perfluorooctane sulfonate) and PFOA (perfluorooctanoic acid, also known as C8) in the spring of 2016, there has been a surge in state regulation of PFAS (per- and polyfluoroalkyl substances) and litigation. PFAS have emerged as a contaminant of concern at scores of sites ...
